Week 3: Creating Community Feedback Loops to Fast Track Change

Third Module for “The Why and How of Working with Communities through Collective Impact” E-Course

March 2015
Creating Community Feedback Loops to Fast Track Change

This free e-course will help you better understand the process of working with community members through collective impact.

Time: ~45 minutes of reading; ~2 hours of group time

This is the third of five modules to help collective impact initiatives better understand why and how to work with community members. Each module includes resources, discussion questions and interactive exercises. While the course can be taken as an individual, it is recommended that participants discuss the modules in a group, with other members of their collective impact initiative. We recommend setting aside a few hours each work week to discuss the resources and complete the exercises. We also offer questions for each resource to help guide discussion.

This module has four components to complete: Reading materials, an exercise, online discussion and a post-module survey. There is also an additional exercise and additional resources to go deeper in certain areas.

This e-course is not intended to be seen as the final word on community engagement in collective impact, but rather a starting place for the conversation. We offer these curated resources as an introductory scan of the literature and a way for your collective impact initiative to begin developing strategies for partnering with community members more deeply. This material is meant to help you continue to develop your thinking from Module 1 and Module 2.

Module 3 Purpose

This module will help you think through how to create feedback loops with community members in your collective impact initiative. The reading materials offer several approaches for doing so, and help you consider what is right for your community. The exercise allows you to assess your “deeper” engagement strategies.

Learning Objectives

- Consider the value of feedback loops for your collective impact initiative.
- Become familiar with different approaches to creating feedback loops with community members.
- Revise the "Assessing Your Engagement Strategies" exercise from Module 1 based on what you learned from this module.
Reading Materials:
These can be found in PDF form in the “Reading Materials” folder of the asset package you downloaded.

Creating Community Feedback Loops to Fast Track Change
This blog post from Living Cities introduces you to the concept of feedback loops, as well as approaches for creating them.

Guiding discussion questions:
- Do the issues discussed in this blog post make you reconsider any assumptions you listed in the “Assessing Your Engagement Strategies” exercise from Module 1?
- How can your collective impact initiative create better feedback loops with the community members you seek to help?

From Input to Ownership: How Nonprofits Can Engage with the People They Serve to Carry Out Their Missions
The entire resource is recommended, but pay particular attention to the frameworks presented on page 4-11 to consider at what level in your initiative feedback loops are needed.

Guiding discussion questions:
- How does the range of constituent engagement approaches from input to co-creation to ownership match with the strategies you listed in the “Assessing Your Engagement Strategies” exercise from Module 1?
- Does anything in this reading make you reconsider any assumptions you listed in the “Assessing Your Engagement Strategies” exercise from Module 1?

Listening to Those Who Matter Most, the Beneficiaries
This reading builds on the others in this module, and in particular provides good examples of what feedback loops could look like.

Guiding discussion questions:
- Do any of these examples of creating feedback loops fit with your collective impact initiative?
- Can these approaches be incorporated into the strategies you outlined in “Assessing Your Engagement Strategies” from Module 1?

Case study: Engaging Parents & Principles to Cure San Antonio’s Chronic Absenteeism
This case study from the Strive Together network illustrates how creating a robust data collection infrastructure can lead to better outcomes. It shows how data can help engage with community members and focus your work.

Guiding questions:
- What led to the success of P16Plus Council’s feedback loops with parents and school staff?
- What role does data collection and data infrastructure play in developing feedback loops?
**Exercise:**

**Assessing Your Engagement Strategies from Module 1**

Now that you have completed three modules, go back to the from Module 1 and see what changes you and your group would make. Do you need to change your goals? Your strategies? Did you learn that some of your assumptions may be misguided? Again, use exercise as a guide for discussion with your collective impact initiative.

**Online Discussion:**

There are many ways you can discuss the course topics in this and other modules with participants:

Join the on-going conversation on the Collective Impact Forum [community discussion page](#), which requires free registration.

Join the conversation with other course participants, join our Twitter “study hall” on Friday, April 3rd at 1pm ET (10am PT; 6pm GMT) to ask your questions and share your insights. We will be joined by special guests from [Feedback Labs](#) and [Keystone](#) to help spark and moderate the discussion.

Use the hashtag #CEinCI to join in.

**Post-Module Survey:**

Once you and our team have completed this module, please [complete the post-module survey](#), which will take five minutes to complete. This survey lets us know you have completed this module, and it also gives us valuable feedback on how to improve the e-course.
The following exercise and resources are recommend but not required as a part of the module.

**Additional Resources:**

- Center for Effective Philanthropy offers resources on creating feedback loops with beneficiaries. In particular, their report "Hearing from Those We Seek to Help" provides some baseline data on how nonprofits are using feedback.

- Keystone’s "feedback systems" framework outlines how to design feedback loops. Keystone works with social sector organizations to improve their data collective and reporting.

- The Fund for Shared Insight supports nonprofits in developing feedback loops. Their webpage includes many examples of organizations using feedback loops.

- Constituent Feedback App Store is a searchable store of apps that will help you collect feedback from community members and other intended beneficiaries.

- Feedback Labs’ Feedback ToolKit includes simple tools to close the feedback loop. Contact toolkit@feedbacklabs.org for comments and questions
